
ABSTRACT

1
①

A method for manufacturing a gelatinous elastomer article comprising a series of steps. The steps include selecting a plasticizer, selecting a triblock copolymer of the general configuration A-B-A, mixing the plasticizer and triblock copolymer such as by melt blending or use of a compounding screw in order to produce a gelatinous elastomer, permitting the gelatinous elastomer to cool, selecting a forming device such as a die or mold, melting the gelatinous elastomer, and forcing the gelatinous elastomer into the forming device in order to form a gelatinous elastomer part.
